

BOX GUIDE

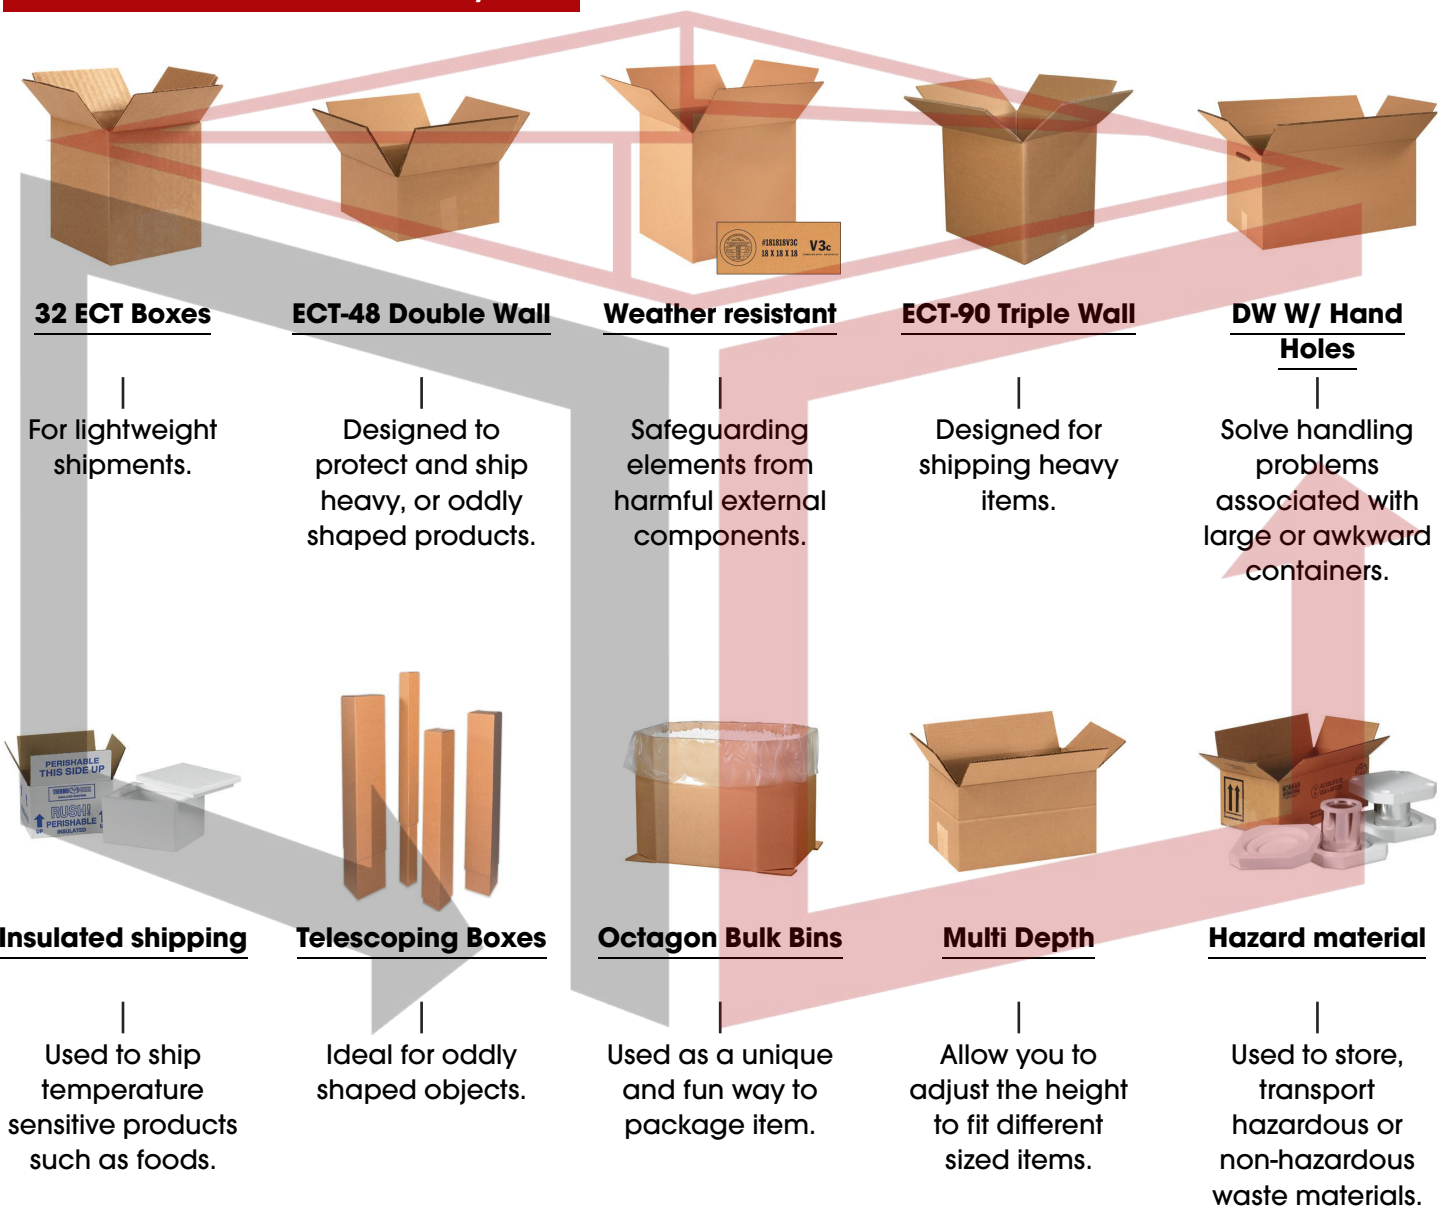

Box strength guidelines

UPS STRENGTH GUIDELINES	
BOX TYPE	MAX WT. (IN BOX)
ECT-32	65 lbs.
ECT-48	100 lbs.
ECT-51	120 lbs.
ECT-71	140 lbs.
ECT-90	300 lbs.

Prevent costly returns caused by shipping damaged, inexpensive boxes that may not withstand the rigorousness of daily shipping and handling.

- We recommend a ECT-48 Double Wall Corrugated which provides more strength and protection than 32 ECT boxes, a budget-friendly alternative for lightweight shipments.
- SSBM ECT-48 boxes are made with heavier paper and have a 40 LB. greater weight capacity and bursting strength than 32 ECT boxes.

What’s the best box for you?

Measuring a box

- Listed dimensions are always inside dimensions.
- The first dimension is length. Length is always the longest side of the box that has a flap.
- The next dimension is width. The width side also has a flap but is always the side shorter than the length.
- Height is the only dimension without a flap. Height measurements do not include flaps.

STANDARD BOXES

MODEL NO.	LXWXH
BX446	4" x 4" x 6"

LONG BOXES

MODEL NO.	LXWXH
BX446	6" x 6" x 3"

TALL BOXES

MODEL NO.	LXWXH
BX446	4" x 4" x 8"
